**ABSTRACT**

A method of manufacturing a liquid crystal display panel,  
comprising the steps of: forming a plurality of pixels on a first  
substrate; forming a plurality of micro cell structures on the  
5 first substrate, wherein each micro cell structure surrounds at  
least one pixel; forming a first alignment layer on the first  
substrate; providing the micro cell structures with a liquid  
crystal by utilizing Ink Jet Printing technology; and combining  
the first substrate with a second substrate by forming a sealing  
10 member therebetween.
